

Consent Statement for the Use of Artificial Intelligence (AI)

At Queen Street Medical, we are always working towards improving the quality of care and making your visit as seamless as possible.

In line with this goal, our clinical staff are using AI tools to capture and manage your medical information.

AI tools assist our healthcare professionals by documenting key aspects of your consultation. Operating in the background, it captures essential information such as your symptoms, medical history, and your doctor's recommendations, allowing for smooth and uninterrupted appointments. This allows for detailed and accurate medical records without interfering with your consultation.

To protect patient privacy, photography, video, and audio recording are **not permitted** within this building without prior permission from your clinician.

Your privacy is very important to us. If you have any concerns about the use of AI or would like to opt out, simply let your doctor or our admin team know.

We fully respect your preferences and will gladly switch to traditional note-taking methods.

Thank you for entrusting us with your healthcare needs.
